

for Environmental Services

Engineering Industries

Services: ECWM Engineering Industries provides a wide range of manufacturing services, including machine parts, production lines, sheet metal forming, and other fabricated products for diverse industrial applications, utilizing state-of-the-art machinery and advanced manufacturing technologies.

Area of Experience

■ Design

Our design process addresses client needs and specific requirements through the development of conceptual designs that ensure functional and operational objectives are met. Design activities take into account operational requirements and raw material characteristics to achieve optimal product performance, resulting in complete technical analyses and detailed engineering drawings developed using the latest design software packages.

■ Manufacturing

Our manufacturing lines are equipped with advanced CNC machines, laser and plasma cutting equipment, as well as conventional and CNC turning machines. These capabilities enable the production of finished products with high precision, consistency, and quality.

Sample Projects

- Trommel
- Conveyor belts
- Screens

■ Assembly and Installation

Assembly and installation are carried out using the latest PDM tools and techniques to ensure accuracy, efficiency, and compliance with design specifications.
